

These insights allow advocate organizations to target their strategies and outreach efforts more effectively, and they create metrics that show how the number of domestic violence victims is changing over time.

The database also powers an online dashboard that SAVI and DVN launched in December 2018, with the goal of making the information more accessible and usable by media, advocates, and policymakers. It's available at www.IndyDVdata.org.

The dashboard features interactive maps and charts and information about domestic violence victims, perpetrators, and incidents in Marion County, including the number of incidents, suspects, victims, and arrests by county. Users can also view a map that illustrates where cases of domestic violence are most likely to occur.

"The online dashboard provides public access to data and trends about domestic violence that have never before been available for Marion County," says Sharon Kandris, associate director of The Polis Center.

In January 2018, DVN released a report about domestic violence in Marion County, drawn from information in the database. It noted that 1.2 percent of Marion County's population were victims of domestic violence in 2016, based on reports in the legal system. Unreported incidents are not included in that statistic. Low-income areas in

Marion County averaged 9.3 victims per 1,000 people in 2016, compared to an overall average of 5.5 incidents.

Together, the database and dashboard create an unprecedented level of transparency and provide advocates with powerful new tools to analyze and fight domestic violence.

"In the past, it has been difficult to report ba-

Domestic Violence Network*

sic facts about the scope of domestic violence in Marion County, because data is spread across many agencies and parts of the criminal justice system," says Kelly McBride, executive director of DVN. "By improving upon our ability to report on the state of domestic violence in Marion County by matching data from various local agencies and organizations that work with domestic violence victims and perpetrators, we can use this information to create better strategies to end domestic violence and help victims in our community." ■
